

as, to *act*, or derivative, as *action*, *actionable*, *active*, *activity*. This will much facilitate the attainment of our language, which now stands in our dictionaries a confused heap of words without dependence, and without relation.

WHEN this part of the work is performed, it will be necessary to inquire how our primitives are to be deduced from foreign languages, which may be often very successfully performed by the assistance of our own etymologists. This search will give occasion to many curious disquisitions, and sometimes perhaps to conjectures, which, to readers unacquainted with this kind of study, cannot but appear improbable and capricious. But it may be reasonably imagined, that what is so much in the power of men as language, will very often be capriciously conducted. Nor are these disquisitions and conjectures to be considered altogether as wanton sports of wit, or vain shews of learning; our language is well known not to be primitive or self-originated, but to have adopted words of every generation, and either for the supply of its necessities, or the increase of its copiousness, to have received additions from very distant regions; so that in search of the progenitors of our speech, we may wander from the tropic to the frozen zone, and find some in the vallies of Palestine and some upon the rocks of Norway.
